DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Holland (US 5,813,602) in view of Raymond (US 4,793,545).

Holland discloses an improved railway crossing comprising a rail base (30), a pair of rail members (12) coupled lo said base by a rail clip assembly; a central panel (14) coupled between said pair of rail members; a liner assembly including a base portion; a pair of support arms (34) secured to said base portion and formed of a pliable material to form a seal when engaged with said pair of rail members; a pair of liner members (41b) each bonded to an upper vertical edge of the base portion a predetermined clearance distance from said pair of rail members which defines a flangeway, see figs. 2 and 4d. Holland discloses all of the features as listed above but does not disclose a railway crossing comprising liner that is formed of ultrahigh molecular weight polyethylene material. The general concept of providing a liner that is formed of ultra high molecular weight polyethylene material falls within the realm of common knowledge as obvious mechanical expediency and this is illustrated by Raymond which discloses the teaching of a liner that is formed of ultrahigh molecular weight polyethylene material. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify

Art Unit: 3617

Holland to include the use of a liner that is formed of ultrahigh molecular weight polyethylene material in his advantageous railway crossing as taught by Raymond in order to reduce noise in the crossing.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Hull, Egan Jr are cited to show related railway crossing comprising a liner assembly including extending arms.

Hofstetter is cited to show related rail liner assembly with a liner bonded thereto.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frantz F. Jules whose telephone number is (703) 272-6681. The examiner can normally be reached on Monday-Thursday and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph S. Morano can be reached on (703) 272-6684. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
